Microsoft 70-620

TS:Configuring Windows Vista Client

Q&A   v 3.36

http://www.CertInside.com/

CertInside,*The Most Realistic Practice Exams!*

1. You need to remove any Microsoft Windows Internet Explorer 7 add-ons in Microsoft Windows Vista computers that do not have prior approval from the following authorities:

Microsoft

System manufacturer

Service provider

What should you do?

A. Remove any add-ons that are not found in the list of downloaded ActiveX controls.

B. Remove any add-ons that are not found in the list of add-ons used by Windows Internet Explorer 7.

C. Remove any add-ons that are not found in the list of add-ons that run without requiring permission.

D. Remove any add-ons that are not found in the list of add-ons that are at present loaded in Windows Internet Explorer 7.

Answer: C

2. A router that performs Network Address Translation (NAT) is installed between your computer and the Internet.   The router fails. You connect the computer directly to the Internet. You need to ensure that the computer is connected to the Internet in the most secure manner possible.   What should you do?

A. Enable the Remote Desktop feature in the System Properties dialog box.

B. Configure the network category of your network connection to Public.

C. Configure the network category of your network connection to Private.

D. Enable the Windows Collaboration Computer Name Registration Service exception in Microsoft Windows Firewall.

Answer: B

3. Your computer has Microsoft Windows Firewall enabled. Your child plays an online game that uses connectionless traffic over port 5678 for inbound and outbound traffic. You need to prevent your child from playing this game. What should you do?

A. Enable the User Account Control feature.

B. Configure the user account of your child as a standard user.

C. Create an outbound rule in Windows Firewall to block UDP port 5678.

D. Create an outbound rule in Windows Firewall to block TCP port 5678.

Answer: C

4. You install Microsoft Windows Vista on a computer. You will share the computer with another user. You need to

prevent the user from making unauthorized changes to the computer. What should you do?

A. Add the user to the Guests group.

B. Create a standard user account for the user.

C. Create an administrator account for the user.

D. Add the user to the Remote Desktop Users group.

Answer: B

5. You need to identify if malware is causing performance issues on your computer. What should you do?

A. Start a Windows Defender scan.

B. Run chkdsk on each drive.

C. View the Microsoft Windows Experience Index of the system.

D. View the System Stability Chart on the Reliability Monitor taskpad.

Answer: A

6. You need to configure the local security policy setting to request a user name and password when you make changes to

the computer system.   What should you do?

A. Enable the Password must meet complexity requirements setting.

B. Enable the User Account Control: Detect application installations and prompt for elevation setting.

C. Configure the Interactive logon: Prompt user to change password before expiration setting to a value between 1 and

999.

D. Configure the User Account Control: Behavior of the elevation prompt for administrators in Admin Approval mode

setting to the Prompt for credentials option.

Answer: D

7. You need to configure Microsoft Windows Firewall to allow technicians to remotely control your computer.   Which

exception should you enable?

A. Remote Registry Service

B. Remote Assistance

C. Remote Administration

D. Remote Service Management

Answer: B

8. You share your computer with other users. You install a new Microsoft Windows Internet Explorer add-on to view videos on the computer. You discover that this add-on conflicts with existing add-ons that other users frequently require. You need to ensure that you are able to view videos without affecting other users. What should you do?

A. Uninstall the new Windows Internet Explorer add-on.

B. Log on as an administrator and disable the new Windows Internet Explorer add-on.

C. Direct other users to log on and disable the new Windows Internet Explorer add-on.

D. Select the Turn off Automatic Website Checking option for the Phishing filter.

Answer: C

9. You install a third-party application on your computer. The application uses port 80 to negotiate a listening port. After establishing the listening port, the application uses dynamic ports above 6000. You need to configure Microsoft Windows Firewall to allow traffic for the application. What should you do?

A. Add a port exception for port 80.

B. Disable the Core Networking exception.

C. Restore the Windows Firewall defaults.

D. Add a program exception for the new application.

Answer: D

10. You run a Windows Defender scan on your computer. You notice a valid program listed in Quarantined Items. You need to use this program on your computer. What should you do?

A. Reinstall the application to another location.

B. Restore the program from the Quarantined Items list.

C. Remove the program from the Quarantined Items list.

D. Repair the program from the Programs option in Control Panel.

Answer: B

11. You run Windows Defender on your computer and receive the following warning message: "Windows Defender Definitions havent been updated." You need to ensure that Windows Defender definition files are updated. What should you do?

A. Restart the Windows Defender service.

B. Repair the Microsoft Location Finder program.

C. Download and install the appropriate files from Microsoft Windows Update.

D. Download and install the latest Windows Defender application from the Microsoft Web site.

Answer: C

12. You need to connect to your computer by using the Remote Desktop Connection client. Which two actions should you perform? (Each correct answer presents a part of the solution. Choose two.)

A. Enable Remote Desktop in the System Properties dialog box.

B. Enable Remote Assistance in the System Properties dialog box.

C. Enable the Remote Desktop exception in Microsoft Windows Firewall.

D. Enable the Remote Assistance exception in Microsoft Windows Firewall.

E. Enable the Remote Administration exception in Windows Firewall.

Answer: AC

13. You use two user accounts for your computer: standard user and administrator. You log on to your computer as standard user but are unable to make advanced configuration changes. You need to make advanced configuration changes while you are logged on as a standard user.   What should you do?

A. Enable the User Account Control: Only elevate executables that are signed and validated option.

B. Disable the User Account Control: Only elevate executables that are signed and validated option.

C. Configure the User Account Control: Behavior of the elevation prompt for standard users setting to the Prompt for credentials option.

D. Configure the User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode setting to the Prompt for consent option.

Answer: C

14. The pop-up blocker is enabled on your computer. A Web site that you visit regularly uses pop-ups.   You need to view the pop-ups from this Web site while maintaining the highest level of security for all other Web sites. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Disable the pop-up blocker.

B. Add the URL of the Web site to the list of trusted sites.

C. Add the URL of the Web site to the list of allowed sites.

D. Enable the Automatic Website Checking option on the Phishing filter.

E. Visit the Web site and select the Always allow pop-ups from this site option.

Answer: CE

15. You need to reduce the level of access that a malicious Web site might have to your computer. What should you do?

A. Start a Windows Defender scan.

B. Enable Microsoft Windows Internet Explorer Phishing Filter.

C. Enable Microsoft Windows Internet Explorer Pop-up Blocker.

D. Confirm that Microsoft Windows Internet Explorer Protected Mode is enabled on the Internet security zone.

Answer: D

16. You need to configure the power settings of your portable computer so that the display turns off when it is inactive and running on battery power. You also need to ensure that the power settings of the hard disk remain unaffected. What should you do?

A. Change the advanced power settings of the Balanced power plan.

B. Configure the portable computer to use the Power saver power plan.

C. Configure the portable computer to use the High performance power plan.

D. Restore the Power Saver power plan to the default settings.

Answer: A

17. Your mobile device runs the latest version of the Microsoft Windows Mobile operating system. Your mobile device supports the use of Bluetooth and Infrared (IR) for data synchronization. You need to configure data synchronization on your computer to only use Bluetooth. Which three actions should you perform? (Each correct answer presents a part of the solution. Choose three.)

A. Clear the Allow USB connections check box.

B. Select the Allow USB connections check box.

C. Select the Bluetooth option from the drop down list.

D. Clear the Allow connections to one of the following check box.

E. Select the Allow connections to one of the following check box.

F. Install the latest version of Microsoft ActiveSync on the computer and perform an initial sync.

Answer: ACE

18. You connect your computer to a multimedia projector. When you play a video, you cannot hear the audio. You need to ensure that the projector provides audio and video playback. What should you do?

A. Configure the computer to use the default sound scheme.

B. Enable the Presentation Settings option. Adjust the volume settings as appropriate.

C. In the Line In Properties dialog box, clear the Allow applications to take exclusive control of this device check box.

D. In the Presentation settings dialog box, select the I always give a presentation when I use this display configuration

check box.

Answer: B

19. Your Microsoft Windows Tablet PC does not recognize some characters correctly from your input device. You need

to ensure that the Windows Tablet PC recognizes all characters correctly. What should you do?

A. Use the Handwriting recognition personalization tool.

B. Disable the Use the personalized recognizer (recommended) option.

C. Select the Autocomplete check box in the Input Panel Options dialog box.

D. Use the Input Panel bar to insert the characters that are not recognized correctly.

Answer: A

20. You plan to give an on-site presentation. The external display available for your audience is a 42-inch flat panel

monitor. You need to ensure that the presentation on the monitor of your computer is duplicated on the external monitor

for the audience. What should you do?

A. Click the Show my desktop on the external display only option.

B. Configure the Presentation settings to mirror your desktop on the external display.

C. Configure the Presentation settings to extend your desktop to the external display.

D. Reduce the screen resolution of your primary display to a value equal to the maximum resolution of the external

display.

Answer: B

21. Your computer has the following hardware configuration:

512 MB of RAM

10-GB hard disk

933-MHz processor

64-MB video adapter.

You want to install Microsoft Windows Vista on this computer.

You need to identify which hardware component fails to meet the minimum hardware requirements.

Which hardware component should you choose?

A. memory

B. processor

C. hard disk

D. video adapter

Answer: C

22. You install Microsoft Windows Vista on a new computer that is not connected to the Internet. After you log on, you receive a warning message about an unknown device. You need to prevent the display of the warning message until you download an available hardware driver. What are the two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Disable the device.

B. Uninstall the device.

C. Select the Ask me again later option from the warning message details.

D. Select the Dont show this message again for this device option from the warning message details.

Answer: AD

23. You need to configure a new computer to dual-boot to the following operating systems:

Microsoft Windows XP Professional

Microsoft Windows Vista

Which two procedures should you perform? (Each correct answer presents a complete solution. Choose two.)

A. Create two partitions. Install Windows XP Professional on the first partition. Boot the computer from the Windows Vista DVD-ROM. Install Windows Vista on the second partition.

B. Create two partitions. Install Windows Vista on the first partition. Boot from the Windows XP Professional installation CD-ROM. Install Windows XP Professional on the second partition.

C. Create one partition. Install Windows XP Professional on the partition. From Windows XP Professional launch the Windows Vista setup utility. Install Windows Vista in the same partition.

D. Create two partitions. Install Windows XP Professional on the first partition. From Windows XP Professional launch the Windows Vista setup utility. Install Windows Vista on the second partition.

Answer: AD

24. You administer your companys network. All client computers run Microsoft Windows Vista. A standard user reports that they are unable to install an application. You need to install the application. What should you do?

A. While the standard user is logged on, at the consent prompt, click Continue and install the application.

B. While the standard user is logged on, at the credential prompt, provide administrative credentials.

C. Create a .pwl file that stores administrative credentials. Double-click the installation file.

D. Copy the contents of the CD-ROM to the local hard disk. Run the application installation from the local hard disk.

Answer: B

25. Your computer runs Microsoft Windows Vista Home Basic edition. You need to record television programs by using Microsoft Windows Media Center. You add a compatible TV tuner. What should you do next?

A. Configure Windows Media Center to recognize the tuner.

B. Install Windows Media Center.

C. Upgrade to Microsoft Windows Vista Home Premium edition.

D. Run a Microsoft Windows Update scan against the Microsoft Update servers.

Answer: C

26. Your computer runs Microsoft Windows 2000 with Service Pack 3. You need to upgrade your computer to Microsoft Windows Vista. You must achieve this goal without reinstalling the applications. What should you do?

A. First upgrade the computer to Microsoft Windows XP Professional, and then upgrade to Windows Vista.

B. Install Microsoft Windows 2000 Professional Service Pack 4 on the computer. Start a Windows Vista upgrade from an installation DVD.

C. Install Windows Vista into a separate partition. Use the Windows Easy Transfer wizard to upgrade your settings to the Windows Vista operating system.

D. Copy your user profile to a removable media. Perform a clean installation of Windows Vista. Copy your user profile to the C:\Users directory.

Answer: A

27. You add a particular e-mail address to the Blocked Senders list in the Microsoft Windows Mail application. You still receive messages from this e-mail address. You need to prevent the receipt of all e-mail messages from this e-mail address. What should you do?

A. Configure the junk e-mail filtering setting to High.

B. Remove the senders e-mail address from the Safe Senders list.

C. Add the senders e-mail domain name to the Blocked Senders list.

D. Configure the Microsoft Windows Mail application to delete suspected junk e-mail permanently.

Answer: B

28. A co-worker uses a gadget from the Windows Sidebar feature on their computer. You examine your computer and find that the gadget is not on the list of available gadgets. You need to add this gadget to the Windows Sidebar feature on your computer. What should you do?

A. Download and install the gadget file.

B. Download the gadget file and copy the file to C:\Windows\System32.

C. Instruct the co-worker to send the gadget file via e-mail and copy the file to C:\Program Files.

D. Instruct the co-worker to send the gadget file via e-mail. Drag and drop the gadget file to the Windows Sidebar feature.

Answer: A

29. Your computer has a TV tuner card installed.   You install a wireless router and a Microsoft Windows Media Center Extender device. You need to access all the digital media on your computer from a different room in your house. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

A. Identify the setup key from the Windows Media Extender device, and input the key on your Microsoft Windows Vista computer.

B. Configure the Windows Media Center Extender device and your Microsoft Windows Vista computer to be on the same subnet.

C. Configure the Windows Media Center Extender device and your Microsoft Windows Vista computer to be on different subnets.

D. Enter the password for your Microsoft Windows Vista user account as the setup key for the Windows Media Center Extender device.

Answer: AB

30. You need to configure Microsoft Windows Fax and Scan to send and receive faxes. What should you do?

A. Create a new fax account.

B. Configure the fax settings to require manual receipt of faxes.

C. Configure the fax security settings to permit Send and Receive.

D. Configure the Transmitting Subscriber ID (TSID) of the fax with the correct phone number.

Answer: A

31. You manage 40 computers that run Microsoft Windows Vista.   You use Microsoft Windows Calendar to publish a calendar to a shared network location.   You need to allow users to automatically view the most recent calendar updates.

What should you do?

A. Instruct all users to configure a calendar subscription that has an update interval of 15 minutes.

B. Instruct all users to perform calendar synchronization for all shared calendar subscriptions.

C. Instruct all users to map a network drive to the folder that holds the shared calendar. Import the .ics file for the shared calendar.

D. Use e-mail messages to deploy the .ics file for the shared calendar to each user. Instruct each user to import the .ics file that is attached to the e-mail message.

Answer: A

32. You are attending a meeting on Microsoft Windows Meeting Space. At the same time, you attempt to join a second meeting also hosted on Windows Meeting space. The dialog box that allows you to join the second meeting fails to open. You need to join the second meeting. What should you do?

A. Join the second meeting by using Microsoft Office Live Meeting.

B. Enable the Windows Media Player Network Sharing Service Windows Firewall exception.

C. Click the Leave meeting option in the first meeting, and then join the second meeting.

D. Open Windows Meeting Space, create a new meeting, and specify a password for others to use when they join the meeting.

Answer: C

33. You install a TV tuner card on your computer. You need to record two different TV shows that run on two different channels at the same time.   What should you do?

A. Install a TV tuner card that supports high-definition TV (HDTV).

B. Install an additional TV tuner card.

C. Contact your TV cable or satellite provider to add support for concurrent recording.

D. Remove the existing TV tuner card. Install a new TV tuner card that supports MPEG-2 video hardware or software video decoding.

Answer: B

34. Your computer is unable to support some display features of Microsoft Windows Aero. You need to check the graphics component rating of the computer. Which Control Panel option should you use?

A. Programs > Programs and Features

B. Appearance and Personalization > Ease of Access Center

C. System and Maintenance > Problem Reports and Solutions

D. System and Maintenance > Performance Information and Tools

Answer: D

35. You install Microsoft Windows Vista on a new computer. The computer has the following hardware configuration:

2.4-GHz processor

2 GB of RAM

512-MB video adapter

250-GB hard disk.

You are unable to view the following features of Windows Vista:

Thumbnails

Previews on folders

Transparent glass.

You need to be able to view the advanced visual features of Windows Vista. What should you do?

A. Press the ALT key and the TAB key simultaneously.

B. Press the WINDOWS key and the TAB key simultaneously.

C. Configure the system properties to optimize for applications.

D. Configure the system properties to optimize for best appearance.

Answer: D

36. You are using Microsoft Windows Internet Explorer 7 on your computer.   You need to print only the graphic on a Web page. How should you print the graphic?

A. Use the Page Setup option and select only the graphic.

B. Use the Print Preview feature and select only the graphic.

C. Use the Print option from the File menu.

D. Use the Microsoft XML Paper Specification (XPS) Document image printer.

Answer: B

37. You implement Parental Controls game restrictions for your child on your computer. You select the TEEN rating game restriction.   Your child is still able to run some inappropriate games.   You need to prevent access to all inappropriate games. What should you do?

A. Configure the Game Restrictions parental control to disallow games that are not rated.

B. Configure the Game Restrictions parental control to block games that have intense violence.

C. Configure Windows Defender to remove high alert items.

D. Configure Microsoft Internet Explorer in Protected Mode.

Answer: A

38. Your computer fails to produce any audio output. The Device Manager management console is as shown in the following exhibit. (Click the Exhibit button.)

You need to receive audio output from your computer.

What should you do?
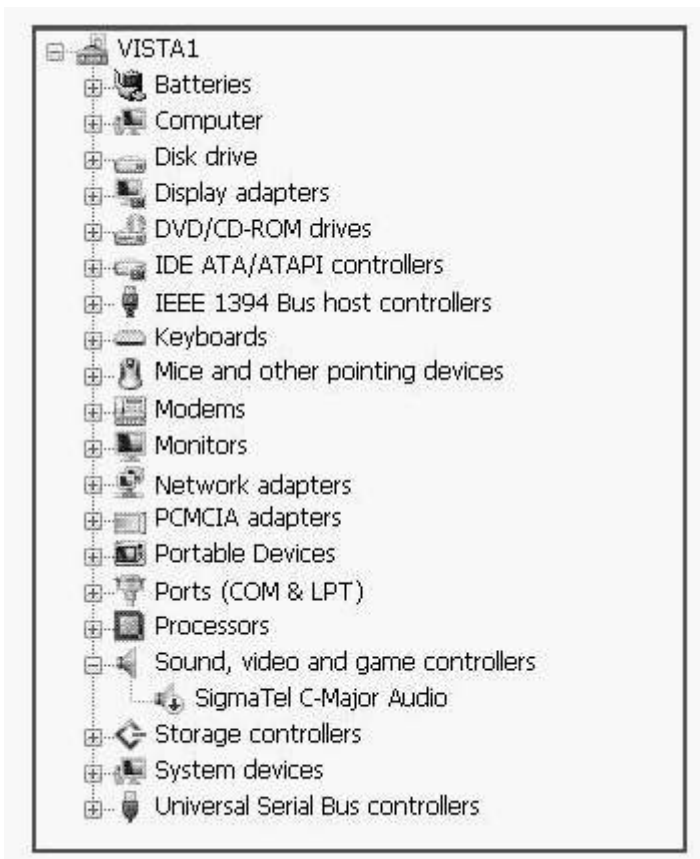

A. Enable the audio hardware.

B. Initiate a Microsoft Windows Update scan.

C. Update the driver for the audio hardware.

D. Download and run the latest installation program for the audio hardware from the manufacturer.

Answer: A

39. You need to verify whether your computer can obtain all of the latest operating system updates.What should you do?

A. Confirm that your computer has a Microsoft Windows Experience Index base score above 3.0.

B. Run Microsoft Windows Vista Upgrade Advisor.

C. Configure Windows Defender to detect updates before scanning.

D. Validate your Windows installation from the Microsoft Windows Genuine Advantage Web page.

Answer: D

40. You configure Microsoft Internet Explorer 7 with a Really Simple Syndication (RSS) subscription to MSN Entertainment on your computer. Your RSS subscription Web page fails to show the information that the RSS feed Web page displays from MSN Entertainment. You need to ensure that Internet Explorer displays the current content from the RSS feed. What should you do?

A. Enable the feed reading view in the RSS feed settings.

B. Configure the RSS feed properties to use the minimum interval value.

C. Configure the RSS feed properties to keep only the most recent 50 items.

D. Configure the RSS feed properties to automatically download attached files.

Answer: B

41. You delete content from a file named Speed.doc that is stored in the C:\Data folder. You edit 20 files in this folder over the next two days.   You need to restore the version of the file that had the correct data. You also need to ensure that the other files in the folder remain unaffected.   What should you do?

A. From the Previous Versions tab, restore the version of the file that contains the correct data.

B. Restore a version of the folder that contains the correct version of the file.

C. Open a version of the folder that contains the correct version of the file.

D. Copy a version of the folder that contains the correct version of the file. Replace the existing version of the folder with the older version.

Answer: D

42. Your portable computer has two 512-MB memory modules installed in the only two memory slots available. You need to improve the speed of your computer. What should you do?

A. Adjust the processor scheduling to optimize for background services.

B. Connect a USB flash drive to the computer. Enable the ReadyBoost feature.

C. Configure the virtual memory file to exist on the same drive as the operating system.

D. Configure the local security policy setting of the computer to clear the virtual page file upon shutdown.

Answer: B

43. Your data recovery strategy must meet the following requirements:

Back up all data files and folders in C:\Data.

Restore individual files and folders in C:\Data.

Ensure that data is backed up to and restored from external media.

What should you do?

A. Use the Previous Versions feature to restore the files and folders.

B. Use the System Restore feature to perform backup and restore operations.

C. Use the NTBackup utility to back up and restore individual files and folders.

D. Use the Backup and Restore Center to back up and restore files.

Answer: D

44. After you install a new update, an application on the computer fails to run. You need to remove the update. What should you do?

A. Use the Software Explorer window.

B. Use the Add or Remove Programs window.

C. Restore hidden updates.

D. Use the Installed updates list on the Windows Update window.

Answer: D

45. You need to use the Event Viewer window to review the event logs for only critical and error events. You also need the maximum amount of detail for each of these events. What should you do?

A. Edit the filter for the Administrative Events view.

B. Create a custom view. Enable the Critical, Error, and Information level events. Select all logs.

C. Create a custom view. Select the Critical checkbox, Error checkbox, and Verbose checkbox. Select all logs.

D. Search for the Critical or Error string by using the Find option of the Administrative Events view.

Answer: C

46. Your wireless network is not listed in the Connect to a network window of your computer. You need to connect to your wireless network. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

A. Right-click and click the Diagnose option in the Connect to a network window.

B. Set the security type value to No authentication in the wireless network properties dialog box.

C. Click the Manually connect to a wireless network option in the Set up a connection or network window.

D. In the Wireless Network properties dialog box, click the Connect even if the network is not broadcasting option.

E. Configure the correct IP address, subnet mask, and default gateway for the target network in the wireless network connection properties dialog box.

Answer: CD

47. You install a wireless router and disable the Service Set Identifier (SSID) broadcast feature. You need to configure your computer to connect to the wireless network. What should you do?

A. Click the Connect to a network link, right-click the appropriate network, and then click the Connect option.

B. Click the View computers and devices link, right-click the wireless router, and then click the Enable option.

C. Click the Set up a connection or network link, and then click the Set up a wireless Ad hoc network option.

D. Click the Set up a connection or network link, and then click the Manually connect to a wireless network option.

Answer: D

48. You have a desktop computer and a portable computer.   Both the computers are configured to allow remote desktop connections. You connect to the desktop computer from the portable computer. You need to save files from within the remote session to the C: drive of the portable computer. What should you do?

A. On your portable computer, map a drive to the C: drive of the remote computer.

B. In the System Properties dialog box of the desktop computer, enable the Remote Assistance feature.

C. In the properties of the Remote Desktop Connection application, on the portable computer, select the C: drive as a local resource for the remote session.

D. In the properties of the Remote Desktop Connection application, on the portable computer, click the Automatically detect TS Gateway server settings option.

Answer: C

49. You share your portable computer with a co-worker. You use separate user accounts to log on. A wireless network is available to you and your co-worker. You need to prevent your co-worker from modifying your wireless network profile. What should you do?

A. Disable the Connect even if the network is not broadcasting option.

B. In the Network and Sharing Center window, click the Diagnose and repair option.

C. Set the default wireless profile type to the Use all-users only profile (recommended) option. Recreate the wireless network.

D. Set the default wireless profile type to the Use all-users and per-user profiles option. Recreate the wireless network by using the Save this network for me only option.

Answer: D

50. Your computer connects to both an ad hoc wireless network and a wired network. You need to allow other wireless clients to access the wired network. What should you do?

A. Set the security type to the No authentication (Open) option.

B. Configure the wired and wireless network adapters as a network bridge.

C. Modify the wireless network profile type to the Use all-user profiles only (recommended) option.

D. On each wireless client, set the Service Set Identifier (SSID) for a new wireless network to the name of your wired network adapter.

Answer: B

51. Your computer has a wireless network adapter installed. However, the computer fails to connect to the wireless network. You need to ensure that the computer is able to connect to the wireless network. What should you do?

A. Change the Network Category setting of the wireless connection to Public.

B. Enable the Internet Connection Sharing feature on the wireless network adapter.

C. Rename the wireless network adapter to match the Service Set Identifier (SSID) of the wireless network.
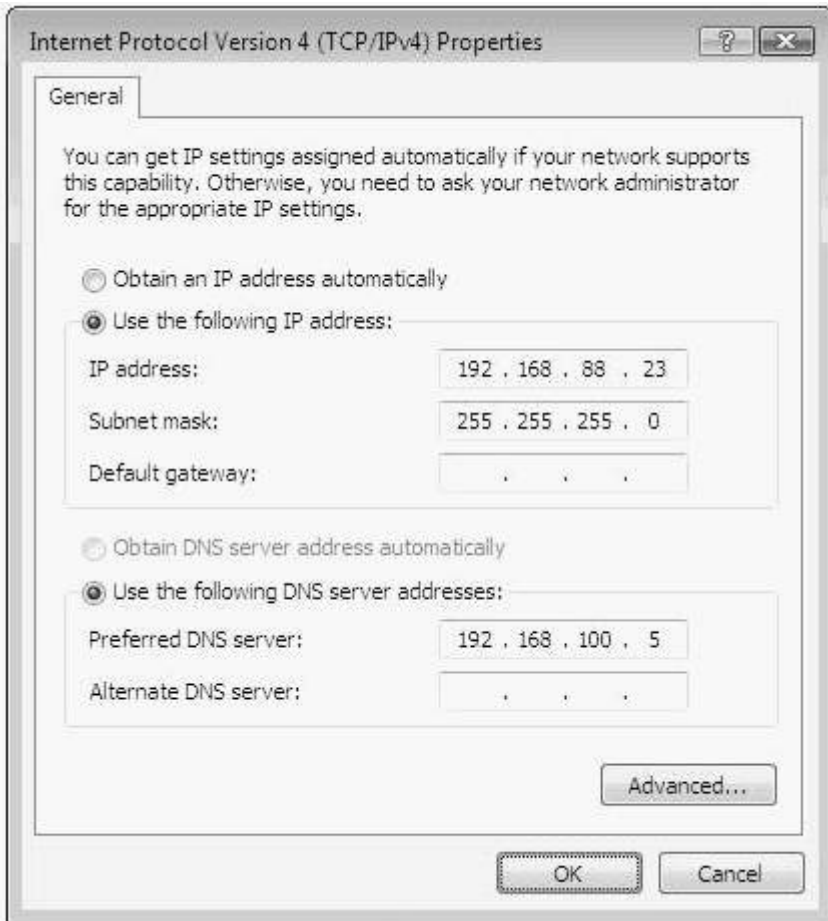

D. Configure the wireless network adapter to connect to the appropriate wireless network from the Connect to a network list.

Answer: D

52. The IP configuration of your computer is as shown in the following exhibit. (Click the Exhibit button.)

You need to connect to resources on other subnets.

What should you do?

A. Configure the default gateway as 192.168.88.1.

B. Configure the default gateway as 192.168.100.1.

C. Configure the default gateway as 192.168.88.23.

D. Configure the preferred DNS server as 192.168.88.23.

Answer: A

53. Your computer uses both wired and wireless network connections. The networks are not connected to each other. You disallow incoming connections in Microsoft Windows Firewall. You create a shared folder. Users on the wireless network cannot access the shared folder. You need to allow access to the shared folder from the wireless network. You also need to maintain the security of the wired network. What should you do?

A. Turn off the Windows Firewall feature.

B. Disable the Block all incoming connections option.

C. Turn off the Spyware and other malware protection option.

D. Enable the File and Printer Sharing exception in the firewall settings of the wireless network adapter.

Answer: D

54. You send a remote assistance invitation for help. You need to open a personal document without allowing the help

desk to view the document. You also need to ensure that the remote assistance session remains connected. What should you do?

A. Press the ESC key.

B. Click the Pause option.

C. Click the Stop Sharing option.

D. Minimize the remote assistance session window.

Answer: B

55. You receive a remote assistance request. It expires before you are able to accept it. You need to increase the amount of time you have to accept remote assistance requests. What should you do?

A. Decrease the account lockout duration in the local security policy.

B. Temporarily enable the Remote Administration exception in Microsoft Windows Firewall.

C. Set the maximum amount of time an invitation can remain open to 12 hours.

D. Enable the Remote Desktop (less secure) option and add yourself to the Remote Desktop Users group.

Answer: C

56. You install Microsoft Windows Vista on a new computer that is not connected to the Internet. After you log on, you receive a warning message about an unknown device. You need to prevent the display of the warning message until you download an available hardware driver. What are the two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Disable the device.

B. Uninstall the device.

C. Select the Ask me again later option from the warning message details.

D. Select the Dont show this message again for this device option from the warning message details.

Answer: AD

57. Your computer runs Microsoft Windows XP Professional. The computer also runs 20 third-party applications. You plan to upgrade your computer to Microsoft Windows Vista. The functionality of the existing 20 applications must be maintained even after you upgrade your computer.   You need to ascertain whether the hardware and software on the Windows XP Professional computer will support the upgrade.   What should you do?

A. Run the mbsacli.exe command.

B. Run the winnt32.exe /checkupgradeonly command.

C. Run the Microsoft Windows Vista Upgrade Advisor application.

D. Compare the Microsoft Windows XP Professional system hardware against the Microsoft Windows Vista Hardware

Compatibility List (HCL).

Answer: C

58. Your computer runs Microsoft Windows Vista Home Basic edition.

When you attempt to upgrade your computer to Microsoft Windows Vista Ultimate edition by booting from the

DVD-ROM, you receive the following warning message:

"The partition you selected might contain files from a previous Microsoft Windows installation. If it does, these files and

folders will be moved to a folder named Microsoft Windows.old. You will be able to access the information in Microsoft

Windows.old, but you will not be able to use your previous version of Microsoft Windows."

You need to complete the upgrade.

What should you do?

A. Boot into safe mode. Launch the setup.exe application from the Windows Vista Ultimate edition DVD-ROM.

B. Boot from the Windows Vista Ultimate edition DVD-ROM and click the command prompt option. Use the diskpart

utility to create a new primary partition for the Windows Vista Ultimate edition installation.

C. Log on to the Windows Vista Home Basic edition installation. Launch the setup.exe application from the Windows

Vista Ultimate edition DVD-ROM, and then click the Custom (Advanced) option.

D. Log on to the Windows Vista Home Basic edition installation. Launch the setup.exe application from the Windows

Vista Ultimate edition DVD-ROM, and then click the Upgrade option.

Answer: D

59. Your computer runs Microsoft Windows XP Professional. You share your computer with two other co-workers.

You purchase a new computer. You install Microsoft Windows Vista on the new computer.

You need to migrate the following content from the old computer to the new computer:

All system and program settings

All users settings

Only the content in the C:\Appdata folder

Which tool should you use?

A. File and Settings Transfer wizard

B. Application Compatibility toolkit

C. Windows Automated Installation toolkit

D. Microsoft Windows Easy Transfer wizard

Answer: D

60. You perform a clean installation of Microsoft Windows Vista on the first partition. Then, you install Microsoft Windows XP Professional on the second partition of the same machine. You are able to log on to Windows XP Professional but do not have the option to boot to Windows Vista. You need to be able to dual boot the computer. What should you do?

A. Run the bootcfg.exe application with the /fastdetect option.

B. Perform a clean installation of Windows Vista on the first partition.

C. Run the msconfig.exe application and change the order of the operating systems in the boot.ini file.

D. Edit the boot.ini file. Add the following line:Multi(0)Disk(0)Rdisk(0)Partition(1)\Microsoft Windows

Answer: B

61. You administer your companys network. All client computers run Microsoft Windows Vista. A standard user reports that they are unable to install an application. You need to install the application. What should you do?

A. While the standard user is logged on, at the consent prompt, click Continue and install the application.

B. While the standard user is logged on, at the credential prompt, provide administrative credentials.

C. Create a .pwl file that stores administrative credentials. Double-click the installation file.

D. Copy the contents of the CD-ROM to the local hard disk. Run the application installation from the local hard disk.

Answer: B

62. Your portable computer has a built-in secondary display on the lid. You need to display your e-mail messages, calendar, and contacts on the secondary display. What should you do?

A. Configure the e-mail, calendar, and contacts gadgets to be displayed on Microsoft Windows Sidebar.

B. Configure the e-mail, calendar, and contacts gadgets to be displayed on Microsoft Windows Sideshow.

C. Configure desktop shortcuts to Microsoft Windows Mail, Microsoft Windows Calendar, and Microsoft Windows Contacts.

D. Configure Quick Launch shortcuts to Microsoft Windows Mail, Microsoft Windows Calendar, and Microsoft Windows Contacts.

Answer: B

63. You need to ensure that when you tap specific areas on your Microsoft Windows Tablet PC, only those areas respond.

What should you do?

A. Calibrate the Windows Tablet PC.

B. Change the Handedness settings of your Windows Tablet PC.

C. Choose the order in which your screen rotates in the Orientation Sequence Settings dialog box.

D. Select the Use the personalized recognizer (recommended) check box in the Windows Tablet PC settings.

Answer: A

64. Your portable computer is in sleep mode. When you resume work on the portable computer, you are not prompted for a password.   You need to ensure that you are prompted for a password each time the portable computer recovers from sleep mode. What should you do?

A. Configure the computer to hibernate when not in use.

B. In the current power plan settings, configure the computer to require a password when recovering from sleep mode.

C. Configure the computer to use the High Performance power plan.

D. Configure the screen saver settings to require a password on resumption of work.

Answer: B

65. You are unable to connect your computer to a wireless network projector. The wireless network projector does not appear in the list of available network projectors provided by the Connect to a Network Projector wizard. You need to connect to the network projector. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Start the Microsoft Windows Media Center Service Launcher service.

B. Enable the File and Printer Sharing Windows Firewall exception.

C. Connect your computer to the same subnet as the network projector.

D. Type the IP address of the network projector in the Connect to a Network Projector wizard.

Answer: CD

66. When you connect an external monitor to your portable computer, the same image appears on both monitors. You need to drag a window from one monitor to the other. What should you do?

A. Change the display setting to extend the desktop.

B. In the Microsoft Windows Mobility Center window, turn on the Presentation Settings feature.

C. Configure the external monitor as the primary display and the built-in monitor as the secondary display.

D. Change the secondary display resolution settings to make them equal to or less than the primary display resolution

settings.

Answer: A

67. Your workgroup contains computers that run Microsoft Windows Vista and Microsoft Windows XP Professional. Employees that use Windows XP Professional do not appear in the Invite people list of a Microsoft Windows Meeting Space meeting.   You need to ensure that all employees are invited to Windows Meeting Space meetings. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

A. Instruct all employees to sign in to the People Near Me feature.

B. Install Service Pack 2 on all computers that run Windows XP Professional.

C. Launch the Ease of Access Center window on all computers in the workgroup.

D. Upgrade all computers that run Windows XP Professional to Windows Vista.

E. Configure Microsoft NetMeeting on the computers that run Windows XP Professional to connect to the meeting.

Answer: AD

68. When you use Microsoft Windows Media Player to begin playback of a music file, you receive the following error message: "You do not have the rights to play this file." You need to configure Windows Media Player to ensure playback of protected digital media. What should you do?

A. Disable the Set clock on devices automatically option.

B. Enable the Automatically check if protected files need to be refreshed option.

C. Enable the Update music files by retrieving media info from the Internet option.

D. Enable the Download usage rights automatically when I play or sync a file option.

Answer: B

69. You manage a department that uses Microsoft Windows Calendar to assign tasks. Another member of the department owns the calendar. The calendar is published to a shared network location. Users report that they do not see the most recent updates to the assigned tasks.   You need to ensure that the shared calendar displays the latest updates.   What should you do?

A. Select the published calendar in Windows Calendar, and then click the Sync All option.

B. Publish your local calendar in Windows Calendar and then click the Automatically publish changes option.

C. Schedule a task to publish the Calendar.ics file to the shared network location. Configure the task to run on an hourly schedule.

D. Instruct the calendar owner to click the Local calendar option in Windows Calendar, and then click the Automatically

publish changes option for tasks.

Answer: B

70. You use Microsoft Windows Mail to download e-mail messages to your Inbox.   You need to minimize the receipt of

e-mail messages that attempt to acquire private financial information. What should you do?

A. Create an Inbox rule that moves potentially malicious email to the Junk Mail folder.

B. Configure the Parental Controls Web restriction setting to High.

C. Configure the phishing filter to move the e-mail messages to the Junk Mail folder.

D. Configure Windows Defender to perform a custom scan of potentially malicious email.

Answer: C

71. A co-worker is unable to invite you to a Microsoft Windows Meeting Space meeting.   You need to receive an invite

to the meeting. What should you do?

A. Sign in to the People Near Me feature.

B. Start the Distributed Transaction Coordinator service.

C. Create a custom Microsoft Windows Firewall exception to allow invitations from Windows Meeting Space.

D. In the Microsoft Windows Mobility Center window, configure the presentation settings.

Answer: A

72. You need to configure Microsoft Windows Fax and Scan to send and receive faxes. What should you do?

A. Create a new fax account.

B. Configure the fax settings to require manual receipt of faxes.

C. Configure the fax security settings to permit Send and Receive.

D. Configure the Transmitting Subscriber ID (TSID) of the fax with the correct phone number.

Answer: A

73. You enable the Windows Sidebar feature on your computer. You discover that you are unable to access the desktop

icons that appear beneath the Windows Sidebar feature. You need to access these desktop icons. What are two possible

ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Close the Windows Sidebar feature.

B. Move all the Windows Sidebar gadgets to the desktop.

C. Move the Windows Sidebar feature to the opposite side.

D. Remove all gadgets from the Windows Sidebar feature.

E. Configure the Windows Sidebar feature to bring all gadgets to the front.

Answer: AC

74. Remote users are unable to connect to a shared folder on your computer.   You need to allow access to the shared folder. What are the two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Restore the Microsoft Windows Firewall defaults.

B. Validate the permissions on the shared folder by using Microsoft Windows Explorer.

C. Enable the File and Printer Sharing exception in Windows Firewall.

D. Enable the Internet Connection Sharing exception in Windows Firewall.

Answer: BC

75. You install a new hardware router that provides wireless network connectivity between your computer and the Internet. You connect to the router by using a wireless network adapter. Your computer is able to access the Internet but is unable to discover other computers in the local wireless network. You need to configure the wireless connection to allow your computer to discover other computers. What should you do?

A. Configure the network category of your wireless network connection to Private.

B. Configure the network category of your wireless network connection to Public.

C. Configure the TCP/IP packet filtering on the wireless network connection.

D. Configure the wireless network connection with the appropriate authentication to the router.

Answer: A

76. You use two user accounts for your computer: standard user and administrator. You log on to your computer as standard user but are unable to make advanced configuration changes. You need to make advanced configuration changes while you are logged on as a standard user.   What should you do?

A. Enable the User Account Control: Only elevate executables that are signed and validated option.

B. Disable the User Account Control: Only elevate executables that are signed and validated option.

C. Configure the User Account Control: Behavior of the elevation prompt for standard users setting to the Prompt for credentials option.

D. Configure the User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode setting to the Prompt for consent option.

Answer: C

77. You need to remove any Microsoft Windows Internet Explorer 7 add-ons in Microsoft Windows Vista computers that do not have prior approval from the following authorities:

Microsoft

System manufacturer

Service provider

What should you do?

A. Remove any add-ons that are not found in the list of downloaded ActiveX controls.

B. Remove any add-ons that are not found in the list of add-ons used by Windows Internet Explorer 7.

C. Remove any add-ons that are not found in the list of add-ons that run without requiring permission.

D. Remove any add-ons that are not found in the list of add-ons that are at present loaded in Windows Internet Explorer 7.

Answer: C

78. Your computer has a wired network adapter and a wireless network adapter. You use the wireless network adapter only when you are traveling. You need to configure the network adapter profile settings to ensure that the computer discovers other network devices only when you are at home. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

A. When you configure access to the wired network at home, set the wired network adapter location type to Public.

B. When you configure access to the wired network at home, set the wired network adapter location type to Private.

C. When you configure access to the public wireless access points, set the wireless network adapter location type to Public.

D. When you configure access to the public wireless access points, set the wireless network adapter location type to Private.

Answer: BC

79. You run a Windows Defender scan on your computer system. The scan identifies one of your applications as having potentially unwanted behavior. You need to continue to use the application. You also need to stop Windows Defender from alerting you about this application. Which Windows Defender option should you use?

A. Ignore

B. Remove

C. Quarantine

D. Always Allow

Answer: D

80. The pop-up blocker is enabled on your computer. A Web site that you visit regularly uses pop-ups. You need to view the pop-ups from this Web site while maintaining the highest level of security for all other Web sites. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Disable the pop-up blocker.

B. Add the URL of the Web site to the list of trusted sites.

C. Add the URL of the Web site to the list of allowed sites.

D. Enable the Automatic Website Checking option on the Phishing filter.

E. Visit the Web site and select the Always allow pop-ups from this site option.

Answer: CE

81. You install Microsoft Windows Vista on a computer. You will share the computer with another user. You need to prevent the user from making unauthorized changes to the computer. What should you do?

A. Add the user to the Guests group.

B. Create a standard user account for the user.

C. Create an administrator account for the user.

D. Add the user to the Remote Desktop Users group.

Answer: B

82. You need to receive alerts when unanalyzed software is detected on your computer. You must achieve this goal without sending information to Microsoft. What should you do?

A. Confirm that Windows Defender is not subscribed to the Microsoft Spynet online community. Select the Use heuristics to detect potentially harmful or unwanted behavior by software that hasnt been analyzed for risks checkbox in Windows Defender.

B. Configure Windows Defender with a basic membership to the Spynet online community.

C. Configure Windows Defender with an advanced membership to the Spynet online community.

D. Configure the Software Explorer option in Windows Defender to display software for all users.

Answer: A

83. You recently installed an application on your computer. The application is configured to automatically start. This application might cause your computer to run slower. You need to prevent the application from auto starting without uninstalling the application. What should you do?

A. Use the Microsoft Windows Task Manager application to end the task for the application.

B. Use the Control Panel application to uninstall the application. Reboot the computer.

C. Use the Software Explorer application to disable the application. Reboot the computer.

D. Use the Services application to disable the Application Experience service, and then launch the application.

Answer: C

84. Your computer is part of a workgroup. You share files with other users on the network. You configure exceptions in Microsoft Windows Firewall to allow file sharing. Users report that they are unable to connect to your computer. You need to ensure that other users are able to access only the shared files. What should you do?

A. Restart the Workstation service on your computer.

B. Change all of your TCP port exceptions to UDP port exceptions.

C. Ensure parental controls are not configured to block file sharing.

D. Clear the Block all incoming connections check box in Windows Firewall.

Answer: D

85. Your computer has a wired network adapter and a wireless network adapter. You use the wireless network adapter only when traveling. You need to configure the network adapter profile settings to ensure that other systems are allowed to discover your computer only when you are at home. What are two possible ways to achieve this goal? (Each correct answer presents part of the solution. Choose two.)

A. When you configure access to the wired network at home, set the wired network adapter location type to Private.

B. When you configure access to the wired network at home, set the wired network adapter location type to Public.

C. When you configure access to the public wireless access points, set the wireless network adapter location type to Private.

D. When you configure access to the public wireless access points, set the wireless network adapter location type to Public.

Answer: AD

86. You need to configure the local security policy setting to request a user name and password when you make changes to the computer system. What should you do?

A. Enable the Password must meet complexity requirements setting.

B. Enable the User Account Control: Detect application installations and prompt for elevation setting.

C. Configure the Interactive logon: Prompt user to change password before expiration setting to a value between 1 and 999.

D. Configure the User Account Control: Behavior of the elevation prompt for administrators in Admin Approval mode setting to the Prompt for credentials option.

Answer: D

87. You share your computer with other users. You install a new Microsoft Windows Internet Explorer add-on to view videos on the computer. You discover that this add-on conflicts with existing add-ons that other users frequently require. You need to ensure that you are able to view videos without affecting other users. What should you do?

A. Uninstall the new Windows Internet Explorer add-on.

B. Log on as an administrator and disable the new Windows Internet Explorer add-on.

C. Direct other users to log on and disable the new Windows Internet Explorer add-on.

D. Select the Turn off Automatic Website Checking option for the Phishing filter.

Answer: C

88. You configure parental controls on your computer for your childs user account. Your child logs on with a different account and is able to access inappropriate Web sites. You need to ensure that your child cannot access inappropriate Web sites. What should you do?

A. Enable Microsoft Windows Firewall.

B. Disable the default administrator account.

C. Use password protection for all user accounts.

D. Configure Web sites you approve of in the list of Trusted Sites of Microsoft Windows Internet Explorer.

Answer: C

89. Your computer runs Microsoft Windows XP Professional. The computer has the following hardware configuration:

512 MB of RAM

1-GHz processor

60-GB hard disk

15 GB of free space

64-MB video adapter.

You perform a clean install of Microsoft Windows Vista.

You need to ensure that Microsoft Windows Aero Experience is supported.

What should you do?

A. Upgrade the memory to 1 GB of RAM.

B. Upgrade the hard disk to 120 GB with 40 GB of free space.

C. Install a video adapter that has 128 MB of RAM, support for Microsoft DirectX 9, and Microsoft Pixel Shader 2.0.

D. Install a video adapter that has 128 MB of RAM, support for Microsoft Scalable Link Interface (SLI) and Microsoft

Pixel Shader 2.0.

Answer: C

90. Your computer hardware supports Microsoft Windows Aero Experience.   The transparency feature does not appear

to be enabled.   You need to use the transparency feature. What are the two possible ways to achieve this goal? (Each

correct answer presents a complete solution. Choose two.)

A. Configure theme settings to Windows Vista.

B. Increase the screen resolution to 1024 x 768 pixels or higher.

C. Change the Color scheme option to Windows Aero.

D. Change the Visual effects option to Let Windows choose whats best for my computer.

Answer: AC

91. You configure a subscription to a Really Simple Syndication (RSS) feed that often includes large videos.   You need

to minimize delay while watching the videos. What should you do?

A. Configure the RSS feed to download attached files.

B. Configure the RSS feed to retain the most recent items.

C. Enable the Turn on feed reading view option of the RSS feed.

D. Enable the Automatically mark feed as read when reading a feed option of the RSS feed.

Answer: A

92. You install Microsoft Windows Vista on a new computer. The computer has the following hardware configuration:

2.4-GHz processor

2 GB of RAM

512-MB video adapter

250-GB hard disk.

You are unable to view the following features of Windows Vista:

Thumbnails

Previews on folders

Transparent glass.

You need to be able to view the advanced visual features of Windows Vista.

What should you do?

A. Press the ALT key and the TAB key simultaneously.

B. Press the WINDOWS key and the TAB key simultaneously.

C. Configure the system properties to optimize for applications.

D. Configure the system properties to optimize for best appearance.

Answer: D

93. Your computer fails to produce any audio output. The Device Manager management console is as shown in the following exhibit. (Click the Exhibit button.)

You need to receive audio output from your computer.

What should you do?
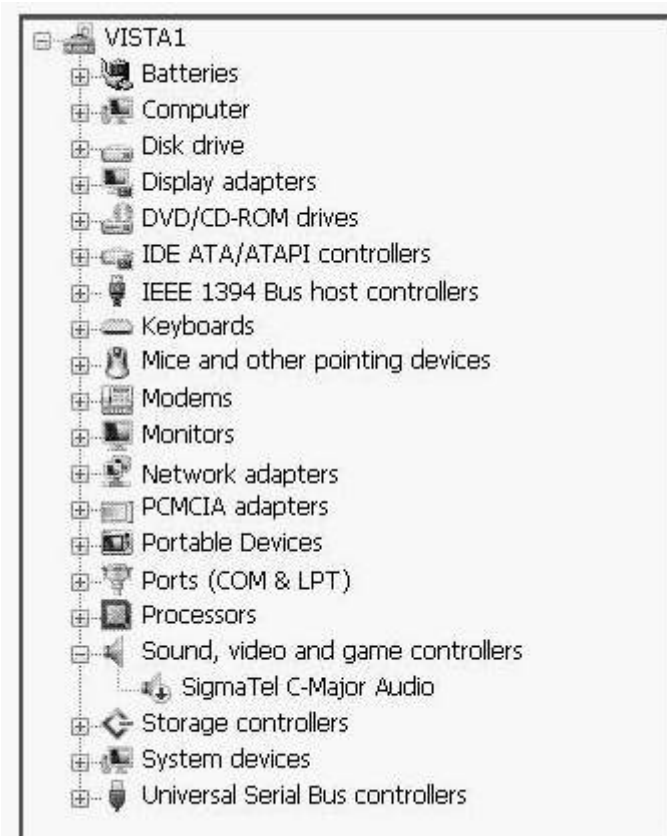

A. Enable the audio hardware.

B. Initiate a Microsoft Windows Update scan.

C. Update the driver for the audio hardware.

D. Download and run the latest installation program for the audio hardware from the manufacturer.
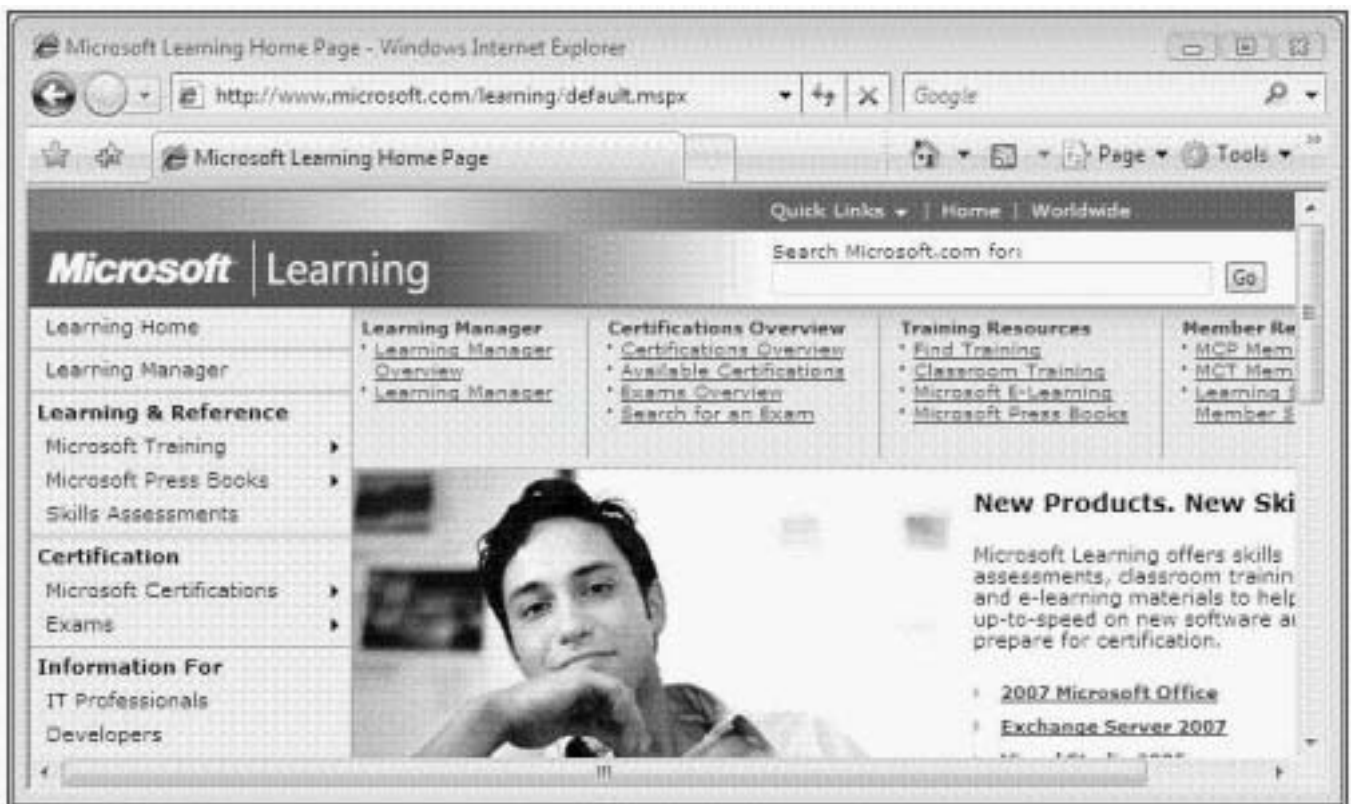

Answer: A

94. You view a Web page by using Microsoft Windows Internet Explorer.

You need to print the Web page with all the embedded graphics. The Web page is as shown in the following exhibit. (Click the Exhibit button.)

What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Press the ALT key and print the Web page.

B. View the Web page source code and print the output.

C. Customize the command bar to include the Print button. Use this button to print the Web page.

D. Save the Web page, and then open the Web page by using Notepad and print the document.

Answer: AC

95. You set up Really Simple Syndication (RSS) subscription feeds on your computer. You need to view the RSS subscription feed in XML format. What should you do?

A. Disable the Turn on feed reading view option.

B. Enable the Always use Clear Type for HTML option.

C. Configure the RSS feed to be sent to your e-mail client.

D. Enable the Automatically download attached files option.

Answer: A

96. You share a computer with other users. You need to ensure that all application and device driver failure reports for this computer are submitted to Microsoft Problem Reports and Solutions. What should you do?

A. After each error occurs, perform a Microsoft Windows Update scan.

B. Turn on the Windows Problem Reporting feature for all users.

C. Configure the computer to take part in the Microsoft Windows Customer Experience Improvement Program.

D. Create a standard user account. Instruct all users to log on by using this standard user account. Configure auditing for this user account.

Answer: B

97. Your portable computer has two 512-MB memory modules installed in the only two memory slots available. You need to improve the speed of your computer. What should you do?

A. Adjust the processor scheduling to optimize for background services.

B. Connect a USB flash drive to the computer. Enable the ReadyBoost feature.

C. Configure the virtual memory file to exist on the same drive as the operating system.

D. Configure the local security policy setting of the computer to clear the virtual page file upon shutdown.

Answer: B

98. You need to back up the existing data on a computer before you install a new application. You also need to ensure that you are able to recover individual user files that are replaced or deleted during the installation. What should you do?

A. Create a System Restore point.

B. Perform an Automated System Recovery (ASR) backup and restore.

C. In the Backup and Restore Center window, click the Back up files button.

D. In the Backup and Restore Center window, click the Back up computer button.

Answer: C

99. You need to ensure that you can recover system configuration and data if your computer hard disk fails. What should you do?

A. Create a system restore point.

B. Create a backup of all file categories.

C. Create a Complete PC Backup and Restore image.

D. Perform an Automated System Recovery (ASR) backup.

Answer: C

100. You share your computer with two users who belong to the Users group. You need to ensure that all users are informed of new updates. What should you do?

A. Enable the Turn on recommended updates via Automatic Updates option.

B. Enable the Allow non-administrators to receive update notifications option.

C. Enable the Enable client-side targeting option and specify the target group.

D. Disable the Do not display "Install Updates and Shut Down" option in Shut Down Windows Dialog box option.

Answer: B

101. You discover audit log entries that report attempts to log on to your computer. You need to be notified of all logon attempts that occur on your computer. What should you do?

A. Enable the Problem Reporting feature for all users.

B. Configure a custom view to monitor failed logon events on your computer.

C. Use the Computer Management console to connect to your computer from another computer and monitor the audit logs.

D. In the Event Viewer window, attach a task to a failed logon event. Configure this task to send an e-mail message to your e-mail account.

Answer: D

102. Your computer is unable to access external names or IP addresses. You need to connect to external Internet resources. What should you do first?

A. In a command window, type the ipconfig /displaydns command.

B. In the Network and Sharing Center window, click the View Full Map link.

C. In the Network and Sharing Center window, click the Diagnose and repair link.

D. Configure the DNS server by using an IP address provided by your Internet Service Provider (ISP).

Answer: C

103. You receive a remote assistance request. It expires before you are able to accept it. You need to increase the amount of time you have to accept remote assistance requests. What should you do?

A. Decrease the account lockout duration in the local security policy.

B. Temporarily enable the Remote Administration exception in Microsoft Windows Firewall.

C. Set the maximum amount of time an invitation can remain open to 12 hours.

D. Enable the Remote Desktop (less secure) option and add yourself to the Remote Desktop Users group.

Answer: C

104. You are able to access a Web server from your computer by using the IP address of the Web server. You fail to access the Web server when you use its fully qualified domain name. Other users on your network can access the Web server by using both the IP address and the fully qualified domain name. You need to access the Web server by using the fully qualified domain name. What should you do?

A. Use the Diagnose and repair feature in the Network and Sharing Center.

B. At the command prompt, type ipconfig /allcompartments.

C. Disable the NetBIOS feature on your network adapter.

D. Configure the correct default gateway on the Alternate Configuration tab of your network connection properties dialog box.

Answer: A

105. You share your computer with a co-worker by using separate user accounts to log on. Your co-worker modifies the wireless network properties. When you use the computer, the change in properties is not reflected.   You need to ensure that you can view all the changes made to the wireless network properties. What should you do?

A. Disable the Connect even if the network is not broadcasting option.

B. In the Network and Sharing Center window, click the Diagnose and repair option.

C. Set the default wireless profile type to the Use all-users only profile (recommended) option. Recreate the wireless network.

D. Set the default wireless profile type to the Use all-users and per-user profiles option. Recreate the wireless network with the Save this network for me only option.
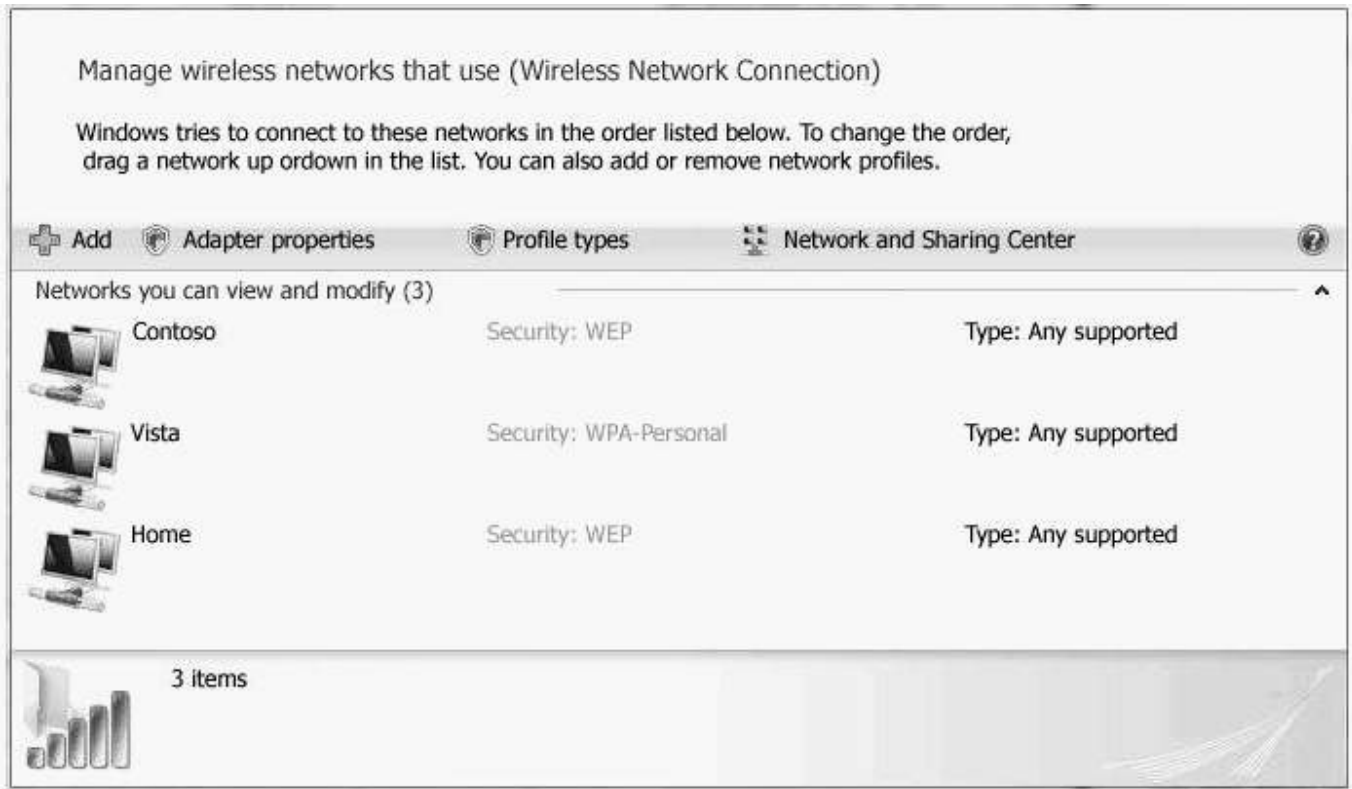

Answer: C

106. You install a wireless router on your computer and set the Service Set Identifier (SSID) to Home.

The Connect to a network list is as shown in the following exhibit. (Click the Exhibit button.)

You need to ensure that you connect to your wireless network immediately whenever it is available.

What should you do?

A. Connect to the Home wireless network manually.

B. Move the Home wireless network to the top of the list.

C. Configure the external interface of the wireless router to have a dynamic IP address.

D. Configure a static IP address that is appropriate for the internal network of the wireless router.

Answer: B

107. You have two desktop computers at your home. You establish a remote desktop connection from one computer to the other. The remote session fails to show the desktop background of the remote computer. You need to view the desktop background when you establish a remote session. What should you do?

A. Copy the desktop background image file from the remote computer to the local computer.

B. Configure the Remote Desktop Connection properties to display the remote desktop in full screen.

C. Click the Broadband option on the Experience tab of the Remote Desktop Connection properties.

D. Click the LAN (10Mbps or higher) option on the Experience tab of the Remote Desktop Connection properties.

Answer: D

108. You connect your computer to a wireless network. You discover that this new connection fails to show in the Connect to a network window. You need to view this connection in the Connect to a network window. What should you do?

A. Click the Diagnose and repair link.

B. Enable the Turn on notification of new networks option.

C. Configure the Connect to a network window to show all networks.

D. Disable the Connect automatically when this network is in range option, and then enable the Connect even if the network is not broadcasting option.

Answer: D

109. Your portable computer has a Virtual Private Network (VPN) connection configured. You need to connect to the VPN. What should you do?

A. Use the Mobile PC program.

B. Use the Ease of Access program.

C. Use the System and Maintenance program.

D. Use the Network and Sharing Center program.

Answer: D

110. You report to the IT department in your company that your computer has a connectivity problem. The department requests that you configure your system with the following value: 2001::f85c:494e:7:4bd4

You need to configure your computer accordingly.

What should you do?

A. Use the given value as an IPv6 address.

B. Use the given value as a DNS suffix search item.

C. Use the given value as a WEP key for a wireless network.

D. Use the given value as a manually assigned MAC address.

Answer: A

111. You have a desktop computer and a portable computer. Both the computers are configured to allow remote desktop connections. You connect to the desktop computer from the portable computer. You need to save files from within the remote session to the C: drive of the portable computer. What should you do?

A. On your portable computer, map a drive to the C: drive of the remote computer.

B. In the System Properties dialog box of the desktop computer, enable the Remote Assistance feature.

C. In the properties of the Remote Desktop Connection application, on the portable computer, select the C: drive as a local resource for the remote session.

D. In the properties of the Remote Desktop Connection application, on the portable computer, click the Automatically detect TS Gateway server settings option.

Answer: C

112. You subscribe to a Really Simple Syndication (RSS) feed for news updates on your computer. You need to edit the RSS subscription properties. What should you do? (To answer, click the right spot on the screen in the answer area.) - <e

Answer:
